

Demo Planning Planning

Date	6July 2026
Team ID	XXXXXX
Project Name	Rising Waters – Flood Prediction Using Machine Learning
Maximum Marks	1 Mark

Demo Planning: Planning:

The project demonstration is planned to showcase the complete functionality of the Flood Prediction using Machine Learning system in a logical and systematic manner. The demonstration begins with introducing the real-world problem of flood prediction and the motivation behind developing the system. Next, the overall architecture, machine learning workflow, and technologies used are briefly explained. A live demonstration is then performed by launching the Flask application, entering environmental parameters such as rainfall, humidity, river level, and temperature, and displaying the predicted flood risk generated by the trained machine learning model. Finally, the testing results, model performance metrics, and future enhancement possibilities are discussed before concluding with a question-and-answer session.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Introduce the flood prediction problem, project objectives, and motivation.	2	Team Member 1
2	Solution Overview	Explain the system architecture, dataset, machine learning algorithm, and software tools used.	3	Team Member 2
3	Live Feature Demonstration	Demonstrate the Flask application by entering environmental parameters and displaying flood prediction results.	5	Team Member 3
4	Performance Evaluation	Present model accuracy, confusion matrix, precision, recall, F1-score, and testing results.	2	Team Member 4
5	Future Enhancements	Explain possible future improvements such as real-time weather API integration, IoT sensors, and cloud	1	Team Member 5

		deployment.		
6	Conclusion & Q&A	Summarize the project outcomes and answer questions from the evaluators.	2	All Team Members

Flow Summary: Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the need for an intelligent flood prediction system and project objectives.
2	Solution Overview	Present the project architecture, dataset preprocessing, feature engineering, machine learning model, and Flask application.
3	Live Feature Demonstration	Run the application, provide sample inputs, predict flood risk, and explain the generated output.
4	Q&A Session	Address evaluator questions, discuss project performance, limitations, and future enhancements.
