

Customer Journey Map

Date	1 July 2026
Team ID	xxxxxx
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	•Checks rainfall data •Watches weather reports •Notices flood conditions	•Searches flood prediction system •Opens web application •Enters weather values	•Clicks predict button •Checks prediction result •Takes safety measures
Touchpoint <i>What part of the service do they interact with?</i>	•Weather news •local alerts •Environment changes	•Website homepage •Input form •User dashboard	• Result page • Prediction output • Warning message
Customer Thought <i>What is the customer thinking?</i>	•Flood may happen soon •Weather looks dangerous •Need information	•Need early prediction •Want accurate result •Need reliable system	• System should help me • Is my area safe? • Can I prepare early?

Customer Feeling <i>What is the customer feeling?</i>	• Worried • Uncertain • Concerned	• Hopeful • Curious	• Safe • Confident • Prepared
Process Ownership <i>Who is in the lead on this?</i>	• User observes weather conditions • User checks rainfall updates • User identifies flood risk	• System accepts user input • Flask application processes data • Data sent to ML model	• ML model predicts flood/no flood • System displays result • User takes preventive action
Opportunities	• Better weather awareness • Faster data collection • Early risk identification	• Easy user interface • Faster processing speed • Accurate data validation	• Higher prediction accuracy • Instant warning alerts • Better disaster management support
