

Communication

Date	6 July 2026
Team ID	XXXXXX
Project Name	Rising Waters – Flood Prediction Using Machine Learning
Maximum Marks	1 Mark

Plan: Plan:

Effective communication played a vital role in the successful development and deployment of the Rising Waters flood prediction system. The team maintained regular communication with members, mentors, and stakeholders to ensure smooth coordination throughout dataset preparation, machine learning model development, Flask web application integration, testing, and deployment. Progress updates, technical discussions, issue tracking, and milestone reviews were conducted using various online collaboration tools.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp / Google Chat	All Team Members	Discuss daily progress, assign tasks, review completed work, and resolve blockers.
2	Progress Update	Weekly	Google Meet	Team Lead & Mentor	Discuss daily progress, assign tasks, review completed work, and resolve blockers.
3	Issue / Bug Discussion	As Needed	GitHub / Google Meet	Development Team	Review milestone completion, evaluate model performance, and monitor project schedule.
4	Stakeholder Review	Bi-Weekly	Google Meet	ML Team & Mentor	Resolve machine learning, Flask integration, dataset preprocessing, and prediction-related issues.
5	Final Demo Rehearsal	Once	Google Meet	Entire Team	Analyze evaluation metrics such as Accuracy, Precision, Recall, and F1-Score and improve model performance.
6	Final Project Demonstration	Once	Google Meet / SkillWallet	Entire Team & Evaluators	Demonstrate the complete flood prediction system, explain project workflow, and present results.

Challenges & Resolutions: Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
------	-----------------	---------------------------

1	Difficulty integrating the trained machine learning model with the Flask web application.	Standardized the project structure, verified model serialization using Joblib, and thoroughly tested API integration before deployment.
2	Inconsistent preprocessing of user input and training dataset features.	Implemented a common preprocessing pipeline using the saved StandardScaler to ensure consistent feature scaling during prediction.
3	Managing project tasks across multiple milestones and activities.	Maintained a shared Kanban board and conducted regular progress meetings to track task completion and assign responsibilities.
