

Project Initialization and Planning Phase

Date	1 July 2026
Team ID	XXXXXX
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Floods are one of the most destructive natural disasters, causing severe loss of life, property, agriculture, and infrastructure. People living in flood-prone areas often do not receive timely warnings before a flood occurs. Traditional flood monitoring systems are slow and unable to accurately analyze multiple factors such as rainfall, river water level, humidity, temperature, and historical weather patterns. This project aims to develop a machine learning based flood prediction system that can analyze environmental data and provide early flood prediction alerts. The solution will help communities prepare in advance, reduce potential losses, and support safer decision-making during extreme weather conditions.

Example:

Problem Statement (PS)	I want (Customer)	I'm trying to	But	Because	Which makes me feel
PS1	A person living in flood-affected or flood-prone regions.	Predict floods in advance so I can stay safe and protect my family	I do not have a reliable system that analyzes weather and environmental	Weather patterns change rapidly and traditional methods are slow and not data-driven.	Worried, anxious and unprepared for potential floods.
