

Define Problem Statements

Filled project document for GitHub and SkillWallet submission

Date	28 June 2026	Team ID	To be updated in SkillWallet
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction	Team Members	Devireddy Prasanna, Chokka Abitha, Navya Borugadda, Bodi Varshitha, Mulakala Harika Venkata Sridevi

Customer Problem Statements

PS	I am	Trying to	But	Because	Which makes me feel
PS-1	A meteorologist	issue timely flood warnings	manual analysis delays risk decisions	rainfall and visibility patterns change quickly	concerned about late evacuation alerts
PS-2	A disaster relief coordinator	prioritize resources during monsoon season	risk information is scattered	multiple regions need rapid comparison	uncertain about where to deploy first
PS-3	A government analyst	validate flood prediction performance	traditional methods are difficult to compare	historical data needs repeatable testing	unsure about operational reliability

Final Problem Statement

Authorities need a timely, accurate, and accessible way to classify flood risk from weather readings so that evacuation planning, resource allocation, and operational decision-making can happen before flood impact becomes severe.
